GARDNER T. SWARTS, M. D., *Secretary.*

State of Rhode Island and Providence Plantations.

PROVIDENCE, R. I., February 1, 1912.

To the Honorable General Assembly:

The fifty-eighth Annual Report upon the Registration of Births, Marriages, and Deaths in Rhode Island, including judicial procedure in relation to divorce, and the report of cases of death by violence which were viewed by the medical examiners during the year 1910, with compendary tables of the results of registration in the previous years, is herewith respectfully submitted.

The plan of the preceding years, in regard to the general arrangement of the tables, summaries, and comments, has been followed in this report. Since 1900, Table IX of the yearly report of causes of deaths has been re-adjusted to conform to the nomenclature of the so-called Bertillon system.

While this classification does not reach a perfection which may be desired by all registrars, it has been adopted in order that it may be in conformity with the registration reports of all other principal cities and States having a system of registration. It also places the report in conformation with the registration reports of Canada and other foreign countries, which have agreed to adopt this system.

In the special tables the object has been to present the important facts of many years of registration, as well as of single years, in such manner as to make them readily apparent and relieve the reader of the statistics of much of the labor of personal examination of each of the general tables of the preceding reports for the purpose of ascertaining the relation the various facts bear to each other.

The tabular presentation of the causes of deaths is now arranged in sequence accepted by the Bertillon system instead of alphabetically. The Roman numerals designating the tables have been discarded and the Arabic numerals of the Bertillon system affixed.

The value of a report on vital statistics decreases in proportion to the delay in its publication. Failure on the part of one small town necessarily holds back the compilation of the totals.

An unfortunate delay in issuance of the present report was occasioned by retention of the copy by the Printing Commission for nearly a year.

Respectfully,

GARDNER T. SWARTS,

State Registrar.

CONTENTS.

See INDEX, page 227.

GENERAL TABLES.

	PAGE.
TABLE I. General summary of the births, marriages, and deaths, in 1910, in each town and each county in the State, showing the number of births, the sex and parentage of those born; the number of marriages, with the nativity of those married; the number of deaths, with the sex and nativity of those who died; the aggregate and average age of the decedents of each sex, and of the whole number of decedents whose age was given.....	2-5
TABLE II. Births; showing the number of each sex born in each month of the year, in the several divisions of the State.....	6-7
TABLE III. Plurality births; arranged by months, sexes, and divisions of the State, and showing the nativity of the parents.....	8-9
TABLE IV. Marriages; the number in each month and in each quarter of the year, in the several divisions of the State.....	10
TABLE V. Deaths; showing the number of decedents of each sex in each month, in the several divisions of the State.....	12-13
TABLE VI. Deaths; showing the number of each sex that died at certain stated periods of life in each town and division of the State; also the population of every town and division, with the percentage of deaths to population.....	14-21
TABLE VII. Causes of death and season, in 1910, arranged alphabetically; showing the number of decedents of each sex from each cause, in each month and in the whole year, the number of native born and foreign born, and also the number of native and of foreign parentage for the whole year.....	22-38
TABLE VIII. Causes of death, and age; arranged alphabetically, and showing the number of decedents of each sex from each cause, in each period of life.....	39-49
TABLE IX. Classification (International) and parentage; showing the number and percentage of deaths from each cause and in each class of causes, in the whole State, and in each division of the State, in 1910....	50-61
TABLE X. International classification of causes of death in Rhode Island for fifty-eight years, 1853-1910.....	52

	PAGE.
TABLE XI. Occupations and ages at death; showing the number and the aggregate and average age of death of the decedents, in each occupation and class of occupations, in the whole State, for 1910 and for 58 years and 7 months, ages under 20 omitted.....	63-75
TABLE XII. Occupations and causes of death; showing the number in each occupation and class of occupations, who died from each specified cause, during 1910, omitting ages under 20.....	76-94
TABLE XII. Supplemental diseases.....	95-98

1910.....	13,950.....	596.....	13,354.....	4,558.....	9,298.....

During the period of fifty-seven years there were recorded, in Rhode Island, 443,695 births, of which number 16,797 were still-born and 426,898 were living children.

During the same period there were recorded 164,061 marriages, or 328,122 persons married; and 305,409 deaths.

These results show that in every 26.4 births there was one still-born child, or that in every 1,000 births there were 38 still-born and 962 living children.

The same results also show that the ratio of whole number of living births to the whole number of persons married, and to the whole number of decedents, respectively, during the same period, was as follows:

	Of persons married.	Of Deaths.
For every 100 living births there were.....	76.9.....	and.....71.5

The number of births in 1910 was 484 larger than that of the previous year; the number of marriages smaller by 904 or 1,808 less persons married; and there was an increase of 1,021 deaths.

For every 100 births there were:

	Of persons married.	Of Deaths.
In 1904.....	69.1.....	and.....67.1
In 1905.....	77.4.....	and.....66.7
In 1906.....	80.7.....	and.....67.9
In 1907.....	85.5.....	and.....68.3
In 1908.....	74.4.....	and.....62.3
In 1909.....	84.9.....	and.....64.3
In 1910.....	68.3.....	and.....69.6

* Not including State Institutions.

In Table XV, on the preceding page, may be found the varying proportions of the number of births, marriages, and deaths to every 1,000 of the population in the various towns and cities in the State, as they occurred in 1910.

BIRTHS.

Proportion to Population.

In regard to births, the extreme range of proportion to population was from 9.1 in every 1,000, in Richmond, to 34.2 in Johnston. Following Johnston in the line of largest proportion are Coventry, with 33.9; Warren, with 32.2, and Warwick, with 30.7. Following Richmond in the line of smallest proportion of births to population, are Exeter, with 10.3 in every 1,000; West Greenwich with 10.4, and Tiverton, with 13.4.

The proportions of births to population, in all the counties entire, and in the cities of Central Falls, Newport, Pawtucket, Providence, Woonsocket, and the whole State, during the last seven years, are as follows:

BIRTHS TO EVERY 1,000 PERSONS.

	1910.	1909.	1908.	1907.	1906.	1905.	1904.
Bristol County.....	24.2	23.4	26.6	26.8	24.5	25.0	26.9
Kent County.....	29.7	27.4	26.7	28.0	29.2	26.5	26.9
Newport County.....	19.6	21.6	21.1	20.3	18.7	21.4	20.8
Newport City.....	20.3	21.3	20.7	20.1	18.6	20.4	18.6
Providence County..	25.1	24.8	26.9	27.5	27.0	26.6	26.8
Central Falls.....	29.5	31.2	29.5	32.9	32.8	33.2	28.1
Pawtucket.....	21.3	19.9	26.6	21.0	23.9	25.6	25.0
Providence City....	25.5	25.6	27.4	28.3	26.8	26.2	26.6
Woonsocket.....	30.1	28.2	30.3	32.0	33.1	32.6	33.0
Washington County..	19.4	19.1	20.9	17.6	17.9	18.8	18.2
Whole State.....	24.6	24.3	26.0	26.3	25.9	25.6	25.8

PERSONS MARRIED.

Proportion to Population.

The proportion to the population of persons married can be more correctly shown in counties, or in cities and aggregates of towns, than in single towns.

The following summary will present the proportions in the manner suggested, for the last seven years:

PERSONS MARRIED IN EVERY 1,000.

	1910.	1909.	1908.	1907.	1906.	1905.	1904.
Bristol County.....	15.1	17.7	14.9	16.3	17.2	16.7	18.4
Kent County.....	15.3	15.8	16.7	14.4	14.5	15.5	14.9
Newport County.....	13.8	14.8	13.5	13.9	15.1	14.6	12.6
Newport City.....	15.6	16.7	15.6	15.5	17.4	15.9	14.4
Providence County.....	17.6	22.0	20.6	24.8	22.5	21.1	16.3
Central Falls.....	24.3	29.7	29.1	29.8	19.7	14.9	11.5
Pawtucket.....	17.6	22.2	20.2	21.0	19.1	22.2	17.1
Providence City.....	19.1	24.4	23.8	28.5	26.8	24.6	21.5
Woonsocket.....	18.9	19.8	17.5	24.3	21.6	19.9	18.5
Washington County.....	13.2	18.3	17.0	19.1	15.9	18.4	17.6
Whole State.....	16.8	20.6	19.3	22.5	20.9	19.9	17.8

DEATHS.

Proportion to Population.

The number of deaths, in proportion to the living population, varies considerably from year to year in the different towns. The smaller the towns, the greater generally is the annual variation.

The highest rate occurred in Glocester, that is, 22.1 in every 1,000 of the population; followed by Narragansett, with 20.8, and Portsmouth, with 20.1.

The lowest death rate was in Barrington, that is, 11.8 in every 1,000 of the population; followed by New Shoreham and North Providence, with 12.2 each, Little Compton with 12.5.

The following summary will give the ratios of mortality to the population in the cities and counties of the State, during the seven years ending December 31, 1910:

DEATHS IN EVERY 1,000 OF POPULATION.

	1910.	1909.	1908.	1907.	1906.	1905.	1904.
Bristol County.....	18.5	14.0	15.4	16.6	16.7	19.7	18.0
Kent County.....	18.4	16.2	15.9	16.2	16.2	16.6	17.8
Newport County.....	14.6	14.3	13.2	16.0	14.1	15.7	13.9
Newport City.....	14.1	14.3	12.8	14.2	13.3	15.7	13.9
Central Falls.....	15.6	16.8	16.3	17.7	16.5	18.7	14.8
Pawtucket.....	15.1	15.0	15.8	18.7	16.2	16.8	16.1
Providence City.....	17.7	16.1	16.8	19.2	18.8	17.5	18.5

1910.....	542,610	13,354	40.6	4,458	59.5	9,298	58.4	17.1

During the ten years, 1869-1878, the average annual birth rate was one birth to every 40.3 of the population, or 24.8 births in every 1,000; during the ten years, 1879-1888, the average birth rate was one birth in every 42.2 of the population, or 23.7 in every 1,000, a falling off of a fraction over one birth in every 1,000 of the population.

From 1899 to 1908 the average annual birth rate was one birth in every 38.8 of the population, or 25.9 in every 1,000.

Previous to 1895 it was the custom to count still births among the living births in above table.

BIRTHS, 1910.

The general statistics of births in Rhode Island, during the year 1910, derived from the returns sent to the office of the State Registrar, may be found on pages 2 to 8, inclusive, in Tables I, II, and III.

The whole number reported is 13,354 as before stated, and shows an increase of 484 over the number in 1909.

SEX OF THE CHILDREN.

Of the 13,354 children whose births were registered in 1910, there were 6,857 males and 6,497 females. This gives 105 males to each 100 females, or 513.5 males and 486.5 females in each 1,000 children.

The following table shows the number and sex, and the proportions of each sex, of the children born in Rhode Island, during the ten years, 1854-1863, and in each of the last forty-seven years:

1897.....	5,493.....	5,302.....	103.6, or.....	508.8 and 491.2	
1898.....	5,443.....	5,287.....	102.9, or.....	507.3 and 492.7	
1899.....	5,591.....	5,240.....	106.7, or.....	516.2 and 483.8	
1900.....	5,625.....	5,459.....	103.0, or.....	507.5 and 492.5	
1901.....	5,944.....	5,348.....	111.1, or.....	526.4 and 473.6	
1902.....	5,776.....	5,451.....	106.0, or.....	514.5 and 485.8	
1903.....	5,975.....	5,806.....	102.9, or.....	507.2 and 492.7	
1904.....	6,175.....	5,901.....	104.6, or.....	511.3 and 488.5	
1905.....	6 234.....	6,071.....	102.7, or.....	506.6 and 493.4	
1906.....	6,475.....	6,202.....	104.4, or.....	510.8 and 489.2	
1907.....	6,681.....	6,507.....	102.7, or.....	506.6 and 493.4	
1908.....	6,697.....	6,582.....	101.7, or.....	504.3 and 495.7	
1909.....	6,592.....	6,278.....	105.0, or.....	512.2 and 487.8	
1910.....	6,857.....	6,497.....	105.5, or.....	513.4 and 486.5	

The average proportion for fifty-seven years is 105 males to every 100 females. At the end of five years from birth the number of each sex is about equal, the males having a larger mortality during that period.

PROPORTION OF THE SEXES. *Localities.*

In Table II, on pages 6 and 7, will be found the number of children born in the different divisions of the State during the year 1910, together with the number of each sex.

The following table will give more concisely the whole number of children born, arranged according to sex and locality, and the proportion of male children to every 100 female children:

TABLE XVIII.

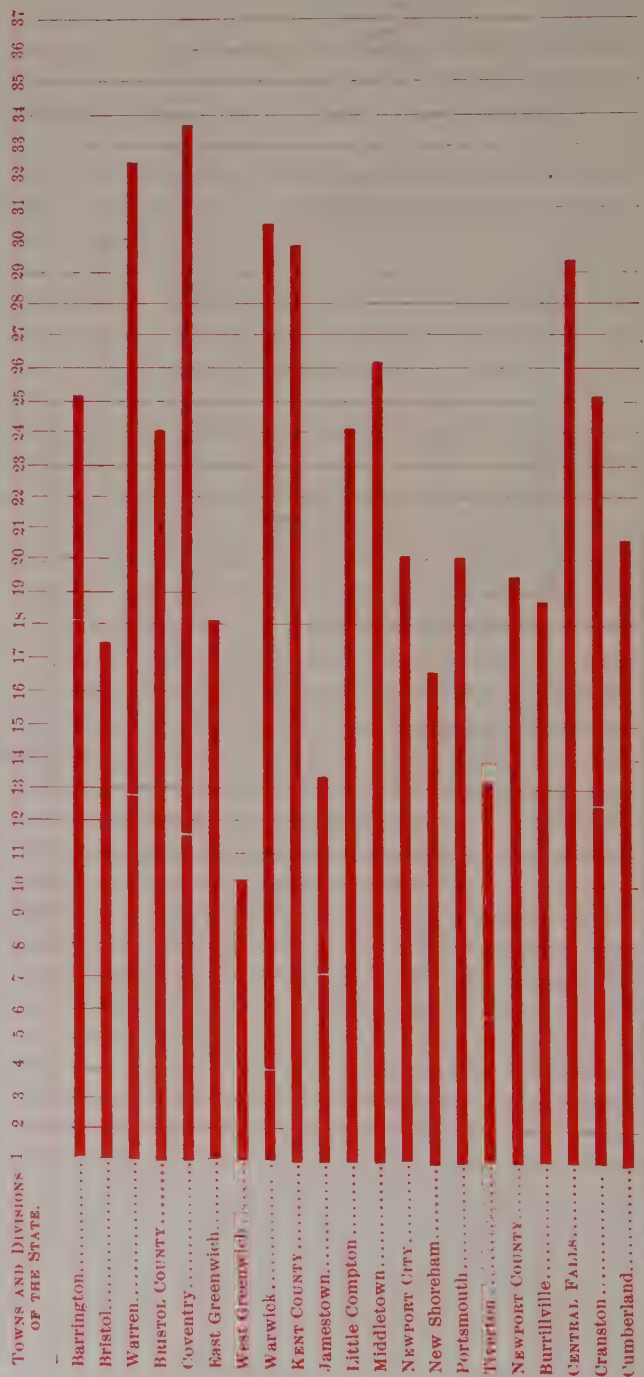

BIRTHS, 1910.	Bristol County.	Kent County.	Newport County.	Providence County, Towns.	Washington County.	Newport City.	Central Falls.	Pawtucket.	Providence City.	Woonsocket.	Whole State.
Males.....	214	570	112	976	267	287	349	566	2,887	629	6,857
Females.....	212	512	110	968	217	263	323	532	2,840	520	6,497
Total.....	426	1,082	222	1,944	484	550	672	1,098	5,727	1,149	13,354
Males to each 100 females.	109.4	111.3	101.8	100.8	123.0	109.1	108.0	106.4	101.7	120.9	105.5

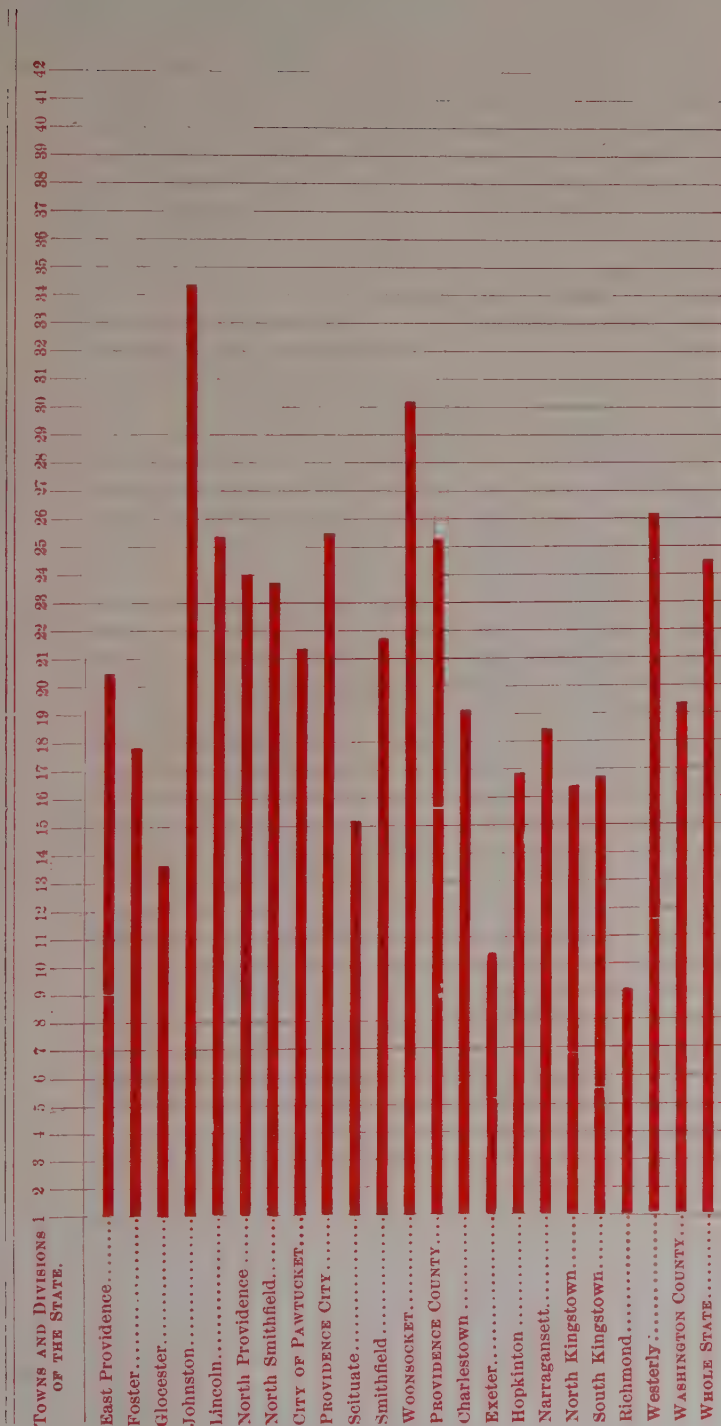

The following table exhibits the proportions of births of the sexes for the past forty-eight years in the larger divisions of the State and in the whole State:

BIRTH RATES.

Diagram I.—Showing the Number of Births in every 1,000 of the Population, in each Town and each County in the State, during the Year 1910.

For explanation see foot-note on next page.

The figures at the top of the perpendicular lines indicate, in whole numbers, the number of births during the year in every 1,000 persons. The spaces are fractional parts of one. For instance, the heavy horizontal line against Barrington, at the top of this diagram, reaches across three-tenths of the space between the perpendicular lines 25 and 26. It shows the birth rate of Barrington, in 1910, was twenty-five and three-tenths in every 1,000 of the population.

TABLE XIX.

Number of Males to each 100 Females.

BIRTHS.	Bristol County.	Kent County.	Newport County.*	Providence County Towns.†	Providence City.	Washington County.	Whole State.

1910.....	100.9	111.3	107.0	107.5	101.6	123.0	105.5

* Including city of Newport. † Including cities of Central Falls, Cranston, Pawtucket, and Woonsocket.

There will be found in the following summary, in the aggregate, the average number of males to each 100 females, born during the forty-eight years from 1863-1910, in the different divisions of the State:

Bristol County.....	109.3 males to each 100 females.
Kent County.....	104.8 males to each 100 females.
Newport County*.....	105.3 males to each 100 females.
Providence County Towns†.....	105.3 males to each 100 females.
Providence City.....	104.8 males to each 100 females.
Washington County.....	107.9 males to each 100 females.
Whole State.....	105.1 males to each 100 females.

BIRTHS AND SEASON.

Table II, on pages 6 and 7 of this report, gives the number of births occurring in the different months of the year, in the several divisions of the State.

According to this table, the greatest number of births in any one month, in 1910, occurred in March, and the largest in any quarter in the second.

The following table shows the total number of children born in the State of Rhode Island, according to the returns, in each quarter of each of the last six years; and also the aggregate number and the percentage of the aggregate of each quarter in fifty-seven years, from 1854 to 1910, inclusive:

TABLE XX.

QUARTERS.	1910.	1909.	1908.	1907.	1906.	1905.	1854-1910, inclusive.

October—December.	3,313	3,162	3,207	3,264	3,165	3,059	113,305	25.98
Whole Year.....	13,354	12,870	13,279	13,188	12,677	12,305	436,204	100.00

Table XX presents results showing that, according to the registration of fifty-seven years, the average proportions of births to the whole number of births in the different quarters of the year were as follows:

* Including city of Newport. † Including cities of Central Falls, Cranston, Pawtucket, and Woonsocket.

January—March.	240.5 in every 1,000 births.
April—June.....	238.3 in every 1,000 births.
July—September.....	231.4 in every 1,000 births
October—December.....	259.8 in every 1,000 births.

The proportions of births in Rhode Island in the different quarters of the year, to the whole number of births in 1910, were as follows:

1. January—March.....	24.67 per cent., or.....	247 in every 1,000
2. April—June.....	25.40 per cent., or.....	254 in every 1,000
3. July—September.....	25.12 per cent., or.....	251 in every 1,000
4. October—December.....	24.81 per cent., or.....	248 in every 1,000
First six months.....		501 births in every 1,000 of whole number.
Second six months.....		499 births in every 1,000 of whole number

BIRTHS. *Sex and Season.*

In Table II, on pages 6 and 7, will also be found the number of births of *each sex* by months, as they occurred in the different divisions of the State, during the year 1910. From it we ascertain the number of *each of the sexes* born during each quarter of the year, with their relative proportions, and also the aggregates and proportions of the same for the whole State.

The following table will present a summary of the quarterly periods, number of births, and proportions of the sexes, for the same year:

	Males to each			Per 1,000	
	100			each quarter.	
	Males.	Females.	Females.	Males.	Females.
1. January—March.....	1,669	1,625	102.5	507	493
2. April—June.....	1,778	1,614	110.2	524	476
3. July—September.....	1,707	1,648	103.6	509	491
4. October—December.....	1,703	1,610	105.8	514	486
Whole Year.....	6,857	6,497	105.5	513	487

The following table shows the number of male children born to every 100 female children, in each quarter of the last five years; and also the proportion of births of male children to each 100 female children born during four periods of ten years each, from 1866 to 1905, inclusive:

TABLE XXI.

YEARS.	1910.	1909.	1908.	1907.	1906.	10 years, 1896 to 1905.	10 years, 1886 to 1895.	10 years, 1876 to 1885.	10 years, 1866 to 1875.
First Quarter..	102.5	101.3	99.5	104.7	100.1	105.8	104.4	105.9	104.1
Second Quarter	110.2	108.6	103.5	99.5	106.9	105.6	106.4	103.8	106.0
Third Quarter.	103.6	107.6	104.1	101.1	105.9	102.9	106.6	106.1	105.4
Fourth Quarter	105.8	102.4	99.9	105.7	104.6	104.5	106.1	105.4	105.7
Total average..	105.5	105.0	101.7	102.7	104.4	104.7	105.8	105.4	105.2

The above table shows the variation of the proportions of the sexes in the different quarters in the different years, and seems to conclusively determine that season has very little, if any, influence in the causation of sex.

PARENTAGE.

By reference to Table I, page 4, in the division of births, there will be found the parentage of the children born in Rhode Island during the year 1910. It will be seen that of the whole number, 13,354, there were 4,086 of native, 6,862 foreign, and 2,406 of mixed parentage.

By mixed parentage is meant the children born of native fathers and foreign mothers, and of foreign fathers and native mothers.

Of native fathers and foreign mothers there were 1,097 and of foreign fathers and native mothers, 1,309.

The following table will show the number and parentage of the children born in the State and the variations of the same from year to year, in each of the last three years; and also the number and variations occurring in four periods of ten years each and two of five years each, from 1858 to 1907, inclusive:

TABLE XXII.

PARENTAGE.	1910.	1909.	1908.	5 years, 1903 to 1907.	5 years, 1898 to 1902.	10 years, 1888 to 1897.	10 years, 1878 to 1887.	10 years, 1868 to 1877.	10 years 1858 to 1867.
Native father and mother.....	4,086	3,838	3,961	18,628	16,931	33,273	29,170	23,645	20,321
Foreign father and mother.....	6,862	6,745	6,928	31,577	27,485	43,821	28,807	26,356	19,665
Native father, foreign mother.....	1,097	1,055	1,127	5,669	5,297	8,840	5,371	3,135	1,690
Foreign father, native mother.....	1,309	1,232	1,263	6,153	5,451	8,832	6,265	4,077	1,696
Parentage not stated.....									293
Total.....	13,354	12,870	13,279	62,027	55,164	94,766	69,613	59,213	43,665

The following table of *percentages* will show, in a different and perhaps clearer way, the same changes that have occurred in the proportions of the births in the different classes of parentage during the last three years, and during fifty years, from 1858-1907, inclusive, in four periods of ten years each, and two of five years:

TABLE XXIII.

PARENTAGE.	1910.	1909.	1908.	5 years, 1903 to 1907.	5 years, 1898 to 1902.	10 years, 1888 to 1897.	10 years, 1878 to 1887.	10 years, 1868 to 1877.	10 years, 1858 to 1867.
Native father and mother.....	30.60	29.82	29.83	30.02	30.68	35.42	41.97	43.36	46.84
Foreign father and mother.....	51.39	52.41	52.17	50.90	49.85	45.94	41.40	44.53	45.36
Native father, for- eign mother.....	8.21	8.20	8.49	9.15	9.60	9.33	7.63	5.37	3.89
Foreign father, na- tive mother.....	9.80	9.57	9.51	9.93	9.87	9.31	9.00	6.74	3.91
Total.....	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00

The registration of births, in 1910, is of interest as continuing to show, as usual, a smaller proportion of children born of native fathers than of foreign fathers. A considerable number of those recorded as native fathers were themselves children of foreign parents.

The percentage of children of mixed parentage was about the same, in 1910, as in the previous year.

The following table will present the percentages of children of native and foreign-born fathers, and of native and foreign-born mothers, respectively, in each of the last three years, and in four periods of ten years, and two of five years each, from 1858 to 1907, inclusive:

TABLE XXIV.

CHILDREN WITH	1910.	1909.	1908.	5 years, 1903 to 1907.	5 years, 1898 to 1902.	10 years, 1888 to 1897.	10 years, 1878 to 1887.	10 years, 1868 to 1877.	10 years, 1858 to 1867.
Native fathers.....	38.81	38.02	38.32	39.18	40.30	44.76	49.65	48.73	50.73
Foreign fathers....	61.19	61.98	61.68	60.82	59.70	55.24	50.35	51.27	49.26
Native mothers....	40.40	39.39	39.34	39.96	40.57	44.74	50.85	50.10	50.75
Foreign mothers....	59.60	60.61	60.66	60.04	59.43	55.26	49.15	49.90	49.25

The number of native fathers of children born, in 1910, was 2,988 less than the number of foreign fathers, and the number of native mothers was 2,564 less than of foreign.

BIRTHS OF COLORED CHILDREN.

The number of births of children of colored parentage reported, for the year 1910, is 230. This number is smaller by 28 than in 1909.

In regard to sex, the number and proportions were as follows, viz.: 121 males and 109 females; or 111 males to 100 females.

As the number of colored persons in the State is, according to the census of 1910, 9,813* the ratio of births in this class would be 23.4 per thousand; or 1 to each 42.6 colored inhabitants.

The following summary will show the changes that have occurred from year to year, in the proportions of the sexes of colored children born in Rhode Island, during the last thirty-five years:

Years.	Whole Number.	Males.	Females.	Males to each 100 Females.
1876-1885.....	1,762.....	849.....	913.....	93.0
1886.....	212.....	117.....	95.....	123.0

NUMBER OF CHILD OF THE MOTHER.

In the following table will be found the number of the child of the mother born during 1910, that is, how many of the children born were reported as the first, second, or third child, etc., of their respective mothers. The statistics on this subject begin with the year 1857, and the following table includes the children reported during the last six years, and also the total for fifty-four years, 1857 to 1910, inclusive:

TABLE XXVI.

NUMBER OF THE CHILD OF THE MOTHER.	1905.	1906.	1907.	1908	1909.	1910.	53 years. 1857-1910.

Total.....	12,305	12,677	13,188	13,279	12,870	13,354	424,912

There was an increase, in 1910, of 484 over the number of births in 1909.

There are varying differences in the proportions of all classes in the different years.

The proportion of each class to the whole number will be shown by the following table, which gives the percentage of the children born in each of the last four years who were respectively the first, second, third, etc., children of the mothers; and which will also give the average percentage of each class of births in each of the last four years, and also in three periods of ten years, and two periods of five years, comprising the forty years from 1868 to 1907, inclusive:

NUMBER OF THE CHILD.	1910.	1909.	1908.	1907.	5 years, 1903 to 1907.	5 years, 1898 to 1902.	10 years, 1888 to 1897.	10 years, 1878 to 1887.	10 years, 1868 to 1877.

The nativity of the mothers under 19 years of age was as follows:

The three at 14 years, were American.

Of the six at 15 years, 1 was Italian, and the remaining 5 were American.

Of the thirty-eight at 16 years, 30 were American, 1 Armenian, 3 French-Canadian, 3 Italian, and 1 Portuguese.

Of the ninety-eight at 17 years, 74 were American, 5 French-Canadian, 14 Italian, 4 Portuguese, and 1 South American.

Of the one hundred and eighty-six at 18 years, 121 were American, 4 Austrian, 5 English, 12 French-Canadian, 1 Galician, 31 Italian, 5 Portuguese, 5 Russian, 1 Swedish, and 1 Syrian.

PLURALITY BIRTHS.

The general statistics in relation to plural births, in Rhode Island, may be found on page 8, Table III.

There were one hundred and forty-four cases during the year, four of which were triplets.

Of the 292 children of plural birth, 147 were males and 145 were females.

The cases occurred in the different divisions of the State as follows:

Bristol county, 6; Kent county, 6; Newport county,* 3; Newport city, 8; Providence county, towns,† 52; Providence city, 69; Washington county, 0.

The following exhibit will show the parentage of children of plural birth in Rhode Island, in 1910, and number of each:

* Not including Newport city.

† Including Central Falls, Pawtucket, and Woonsocket.

Parents both native Americans.....	30

Total.....			144
Total children.....			292

The general statistics of births, and number of *cases* reported in Rhode Island, during a period of fifty-seven years, that is, from 1854 to 1910, inclusive, are as follows:

434,310 cases of single births.....	giving 434,310 children.
4,617 cases of twin births.....	giving 9,234 children.
49 cases of triple births.....	giving 147 children
1 case of quadruple births.....	giving 4 children.

Of the whole number of *cases* of childbirth (438,977), during the fifty-seven years, one in 95 produced twins, one in 8,959 produced triplets, and one in 438,977 produced quadruplets.

Of the whole number of children born during the same period (443,695), ascertained from the reports, one in every 48 was a twin; one in every 3,018 was a triplet.

Of the 4,667 *cases* of plurality births which have occurred in the State during the last fifty-seven years, there were 1,568 cases in which both parents were natives; 2,346 cases in which both parents were foreign; 744 cases in which the parents were mixed, that is, one native and one foreign parent; and 9 in which the parentage was not stated.

The whole number of children born in plurality cases, during the fifty-seven years, was 9,385, of whom 4,736 were males and 4,645 were females; the sex of the remaining four was not given.

STILL-BORN.

The whole number of still-born children reported in Rhode Island, for the year 1910, was 596; this number is larger by 56 than for the year 1909.

The following are the numbers reported from the different divisions of the State:

Bristol County.....	17
Kent County.....	52
Newport County, Towns.....	11
Newport City.....	29
Providence County, Towns.....	78
Central Falls.....	27
Cranston.....	21
Pawtucket.....	39
Providence City.....	253
Woonsocket.....	61
Washington County.....	8
Whole State.....	596

The following table will give the number in each town from which still-births were reported, with the sex, parentage, and color:

TABLE XXVIII.

Still-Born, 1910, Locality, Number, Sex, Parentage, and Color.

SUMMARY OF SEX OF STILL-BORN.

The following table shows the number and sex of the still-born children whose births were reported in Rhode Island during each of the last five years, and also of a period of fifty-seven years, extending from January 1, 1854, to December 31, 1910:

TABLE XXIX.

SEX.	1910.	1909.	1908.	1907.	1906.	Jan. 1, 1854, to Dec. 31, 1910.
Males.....	353	302	299	315	265	9,964
Females.....	243	238	226	226	211	7,175
Total.....	596	540	525	541	476	17,139

The average proportions of the sexes of the still-born, for the period of fifty-seven years, were as follows: In every 100 still-births there were 58 males and 42 females.

Season of Still-Births.—During 1910 the proportions in relation to season, by percentage, were as follows:

First Quarter.....	22.99	Third Quarter.....	23.32
Second Quarter.....	29.70	Fourth Quarter.....	23.99
First half of the year.....	52.69	Last half of the year	47.31

The births of the still-born in the different months of the year, although somewhat variable in number, do not, as a rule, show great discrepancies.

PARENTAGE OF THE STILL-BORN.

Of the 596 still-born children reported in 1910, there were 257 of native and 339 of foreign parentage, reckoned by the nativity of the fathers.

ILLEGITIMATES.

In the following table will be found the whole number of illegitimate births returned during 1910, with the sex, color, parentage, and locality of birth:

TABLE XXX.

Illegitimates, 1910.

TOWNS.	Whole Number.	SEX. . . .		COLOR.		PARENTAGE.	
		Males.	Females.	White.	Black.	Native.	Foreign.
Coventry.....	1	1	1	1

South Kingstown.....	7	2	5	4	3	7
Westerly.....	4	4	2	2	4
WHOLE STATE.....	193	101	92	164	29	145	48

There were returns, during 1910, of 193 children of illegitimate parentage. The number is smaller by 12 than that of the previous year.

Of the illegitimates born during 1910, 101 were males and 92 were females; 164, or 85 per cent., were white, and 29, or 15 per cent., were colored; 145, or 75 per cent., were born of native mothers, and 48, or 25 per cent., of foreign-born mothers.

The ages of the mothers were as follows:

Age.	No. of Mothers.	Age.	No. of Mothers.
14.....	3	28.....	5
15.....	2	29.....	7
16.....	9	30.....	2
17.....	22	31.....	2
18.....	14	32.....	2
19.....	15	33.....	5
20.....	27	34.....	2
21.....	12	35.....	1
22.....	10	37.....	2
23.....	15	39.....	2
24.....	11	Not stated.....	2
25.....	6		—
26.....	9	Total.....	193
27.....	6		

Sixty-six of these illegitimate births occurred at the Lying-in-Hospital, in the city of Providence, and fifteen at the State Alms-house.

The proportion of illegitimates to the whole number of births was one in every 69 cases, or 14 in every 1,000.

MARRIAGES, 1910.

The number of marriages registered in Rhode Island, during the year 1910, was 4,558. The number is smaller by 904 than in 1909.

The general statistics of marriage, in 1910, in relation to season and number, in the different divisions of the State, may be found in Table IV, on the ninth page.

The statistics in relation to the proportion to population of persons married in 1910, in each of the towns and general divisions of the State, may be found in Tables XV and XVI, on pages 105 and 108,

The following table will present the number of marriages, and the ratio of marriage to population, in each year for the period of fifty-one years, 1860 to 1910, inclusive:

TABLE XXXI.

YEARS.	Number Marriages.	Of Population, one Person Married in every	Persons Married per 1,000 of Population.	YEARS.	Number Marriages.	Of Population, one Person Married in every	Persons Married per 1,000 of Population.
1860.....	1,748	50.0	20.0	1886.....	2,750	56.5	17.7

1882.....	2,634	52.5	19.0	1908.....	4,941	51.7	19.3
1883.....	2,611	54.4	18.3	1909.....	5,462	48.5	20.6
1884.....	2,558	58.1	17.2	1910.....	4,558	59.5	76.8
1885.....	2,488	61.3	16.3	Annual average....		52.7	19.2

SEASON.

The following table will show the number and percentage of marriages in Rhode Island, in each month and each quarter of the year 1910, together with the aggregate number and percentage in each quarter for fifty-seven years, viz., from 1854 to 1910, inclusive:

TABLE XXXII.

MONTHS.	Number of Marriages each month, 1910.	Number of Marriages each Quarter, 1910.	Percentage of each Quarter, total Marriages, 1910.	Number of Marriages per Quarter, 57 yrs., 1854-1910.	Percentage each Quarter, 57 years.
January.....	425	1st Quarter... 853	18.72	1st Quarter.. 33,810	20.61
February.....	283				
March.....	145				
April.....	440	2d Quarter... 1,383	30.45	2d Quarter... 43,823	26.72
May.....	300				
June.....	648				
July.....	314	3d Quarter... 1,125	24.68	3d Quarter.. 39,243	23.92
August.....	361				
September.....	450				
October.....	465	4th Quarter... 1,192	26.15	4th Quarter.. 47,164	28.75
November.....	492				
December.....	235				
Total.....	4,558	4,558	100.00	164,040	100.00

The largest number of marriages in any one month, during 1910, occurred in the month of June. For thirty-eight years previous to 1892 the greatest number of marriages was in the month of November. Since then, with the exception of in 1895, 1899, and 1902, the greatest number of marriages has been in the month of June.

During 1910 the proportions in the different quarters, from the largest to the smallest, were as follows: second quarter, 30.45 per cent.; fourth quarter, 26.15 per cent.; third quarter, 24.68 per cent.; first quarter, 18.72 per cent.

NATIVITY OF PERSONS MARRIED.

The following table shows the *number* of marriages, according to the nativities of the parties, for each of the last three years, and also for the aggregate of twenty-five years, from 1858 to 1882, inclusive; one period of ten years, 1883 to 1892; also for three periods of five years each, from 1893 to 1907:

TABLE XXXIII.

BIRTH-PLACE.	1910.	1909.	1908.	5 years, 1903 to 1907. Total.	5 years, 1898 to 1902. Total.	5 years, 1893 to 1897. Total.	10 years, 1883 to 1892. Total.	25 years, 1858 to 1882. Total.
United States.....	1,853	2,461	2,274	10,943	8,594	7,846	14,970	33,553
Foreign countries.....	1,665	1,752	1,636	7,740	5,574	5,318	8,574	13,753
Native groom, foreign bride.	474	611	526	2,649	2,274	1,785	2,960	3,488
Foreign groom, native bride.	566	638	505	2,831	2,187	1,827	2,810	3,876
Not stated.....								64
Total.....	4,558	5,462	4,941	24,163	18,629	16,776	29,314	54,734

It will be understood that in the above enumerations the *parent nativity* of the persons married is not considered, but the country where born.

Parties born in the United States, although children of foreign-born parents, are reckoned as natives.

In the following table are given the *percentages* by birth, of native, foreign, and mixed marriages, in each of the last three years, and in the aggregate of twenty-five years, from 1858 to 1882, inclusive; also for four periods, one of ten, and three of five years each, from 1883 to 1907:

TABLE XXXIV.

BIRTH-PLACE.	1910.	1909.	1908.	5 years, 1903 to 1907.	5 years, 1898 to 1902.	5 years, 1893 to 1897.	10 years, 1883 to 1892.	25 years, 1858 to 1882.
United States.....	40.65	45.06	46.02	45.29	46.22	46.81	51.32	61.30
Foreign countries.....	36.53	32.08	33.11	32.03	29.88	31.65	29.07	25.13
Mixed nativity.....	22.82	22.86	20.87	22.68	23.90	21.54	19.61	13.57
Total.....	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00

It will be of some interest to notice that by the exhibit of the two preceding tables it is shown that, although the marriages of the native born (whether the issue of foreign-born parents or natives) have, as a rule, *increased in numbers*, they have also steadily *decreased in proportion*, with two or three exceptional years, that is, to

the whole number of marriages; while the marriages of the class of the exclusively foreign born have been, for the past thirty years, gradually increasing in proportion.

Denominational.—The 4,588 marriages in 1910 were performed by clergymen of various denominations, or by civil authority, as follows:

DENOMINATIONAL.

70 to 75.....						1	1	1		1			4
75 to 80.....					1								1
No. of Brides.....	888	1946	948	366	194	97	60	32	14	9	3	1	4,458

The extreme discrepancies in the ages of some couples married in 1910 were not so frequent as in some previous years.

The same results in 1910, in relation to numbers in the different age periods, may be presented in a different and perhaps clearer way as follows:

TABLE XXXVI.

1910.	Under 20.	20 to 25.	25 to 30.	30 to 35.	35 to 40.	40 to 45.	45 to 50.	50 to 55.	55 to 60.	60 to 65.	65 to 70.	70 to 75.	75 to 80.	80 to 85.
Males.....	144	1,811	1,361	575	271	155	93	67	41	20	15	4	1
Females.....	888	1,946	948	366	194	97	60	32	14	9	3	1
Total persons...	1,032	3,757	2,309	941	465	252	153	99	55	29	18	5	1

The whole number of persons in each division of ages, of both sexes, married in Rhode Island in each of the last forty-five years, that is, from 1886 to 1910, inclusive, is presented in the following table:

TABLE XXXVII.

YEARS.	Under 20.	20 to 25.	25 to 30.	30 to 35.	35 to 40.	40 to 45.	45 to 50.	50 to 55.	55 to 60.	60 to 65.	65 to 70.	70 to 75.	75 to 80.	80 to 85.	85 to 90.	Not stated.

1910.....	19.5	42.7	20.8	12.3	3.4	1.3	100.0

NUMBER OF TIMES MARRIED.

There will be found in the following table the number of grooms and of brides who were married for the first, second, third, etc., time in 1910:

TABLE XLI.

	First Marriage.	Second Marriage.	Third Marriage.	Fourth Marriage.	Total.
Grooms.....	4,041	486	31	4,558
Brides.....	4,204	333	19	2	4,558

The proportion of *grooms* married for the first time, in 1910, was 88.7 per cent. of the whole number, and the proportion of *brides* married for the first time was 92.2 per cent.

The following table will show not only the number of times each of the parties was married, but also the number of bachelors and widowers who married spinsters, the number who married widows of first or second widowhood, etc., and of spinsters and widows who married bachelors, and widows of the second, third, or fourth marriage, etc.:

TABLE XLII.

GROOMS.	BRIDES.				Total Grooms.
	First Marriage.	Second Marriage.	Third Marriage.	Fourth Marriage.	
First Marriage.....	3,863	173	4	1	4,041
Second Marriage.....	326	147	13	486
Third Marriage.....	15	13	2	1	31
Total Brides.....	4,204	333	19	2	4,558

It will be seen, by Table XLII, that 178 bachelors married widows, 4 of whom had been twice married. Of the 517 widowers who married in 1910, 341 married spinsters and 176 married widows.

MARRIAGES OF PERSONS OF COLOR.

The number of marriages of persons of color in Rhode Island, in 1912, was 127. This includes six marriages in which one of the parties was white. The number and color of the individuals were, therefore, 242 persons of color and 6 persons white. The white persons were all females. The marriages, however, may be properly included in the above class, inasmuch as the offspring of such marriages are persons of color.

The number reported during 1910, from the different towns, was as follows, viz.:

East Greenwich.....	3
Warwick.....e.....	2
Newport City.....	20
East Providence.....	5
Johnston.....	1
Providence City.....	91
Charlestown.....	1
Hopkinton.....	1
Narragansett.....	7
North Kingstown.....	1
South Kingstown.....	1
Total.....	127

MARRIAGES OF THE DIVORCED.

The following table will give the towns from which returns of marriage with the facts of divorce were reported during 1910, the whole number of marriages of divorced persons, whether of one or both parties; also whether the second, third, or fourth marriage of the divorced groom or bride:

TABLE XLIII.

TOWNS.	Number of Marriages.	Number of Divorced Persons Married.	Grooms.	Brides.	Second Marriage of Groom.	Third Marriage of Groom.	Second Marriage of Bride.	Third Marriage of Bride.	Fourth Marriage of Bride.
PROVIDENCE CITY.....	109	117	54	63	50	4	60	3
Coventry.....	1	1	1	1
East Greenwich.....	1	1	1	1
Warwick.....	10	13	7	6	7	6
NEWPORT CITY.....	9	9	3	6	3	6
New Shoreham.....	1	1	1	1
Portsmouth.....	1	1	1	1
Tiverton.....	2	2	2	2
CENTRAL FALLS.....	4	4	4	4
CRANSTON.....	7	7	3	4	2	1	4
Cumberland.....	2	2	2	2
East Providence.....	9	11	7	4	7	4
Johnston.....	2	2	1	1	1	1
Lincoln.....	1	1	1	1
PAWTUCKET.....	9	10	3	7	3	6	1
Smithfield.....	1	1	1	1
WOONSOCKET.....	9	10	2	8	2	8
Hopkinton.....	1	1	1	1
North Kingstown.....	2	2	1	1	1	1
South Kingstown.....	5	5	3	2	3	2
Westerly.....	2	2	1	1	1	1
Total.....	188	203	87	116	79	8	110	5	1

There were 188 marriages, in 1910, in which one or both of the parties had been divorced.

The proportion of the *number of marriages* of which one or both of the parties had been divorced, to the whole number of marriages, was 4.1 per cent., or 1 in every 24.2.

But the proportion of divorced *persons* married during 1910, to the whole number of persons married in the same year, was about 1 in every 45, or 2.2 per cent., or 22 in every 1,000.

The number of divorced persons married, in 1910, was less by 170 than in the previous year.

These 188 marriages of divorced persons were performed by clergymen of the different denominations, or by civil authority, as follows:

Baptist.....	55	Universalist.....	2
Congregational.....	35	Protestant Episcopal.....	2
Methodist.....	18	Lutheran.....	2

DIVORCES, 1910.

According to the returns made to the Secretary of the State Board of Health (State Registrar) by the clerks of the Superior Courts of the different counties of Rhode Island, the number of applications for divorce, during 1910, was seven hundred and fifty-nine (759).

The number of divorces granted, during 1910, was five hundred and two (502).

There were fifty-four less applications made during 1910 than in the preceding year, and the number of divorces granted was twelve less.

Divorces are decreed for the following seven statute causes, viz.:

1. Adultery.
2. Extreme cruelty.
3. Willful desertion for five years of either of the parties, or for a shorter period, in the discretion of the court.
4. Continued drunkenness.
5. Neglect or refusal to provide necessaries (having ability) for the subsistence of a wife.
6. Gross misbehavior and wickedness other than aforesaid.
7. Impotency.

Divorces are also decreed, or marriages set aside, in the discretion of the court, for ascertained affinity, consanguinity, idiocy, insanity, penitentiary crimes, and bigamous or otherwise illegal marriage.

The following table shows the number of applications for divorce, and the number granted, in 1910, in each county of the State; also the causes alleged for the applications:

TABLE XLIV.

COUNTIES.	Number of Applications.	Number Granted.	CAUSES ALLEGED.											Total Causes Alleged.
			Impotency.	Adultery.	Extreme Cruelty.	Willful Desertion.	Continued Drunkenness.	Neglect to Provide Necessaries, etc.	Other Gross Misbehavior.	Void Marriage.	Lived separate and apart 10 years.	Civilly Dead.	Excessive use of Morphine.

38 years, total.....	17,860.....	12,253.....	5,607

The average annual proportion of decrees of divorce granted, during the last thirty-eight years, to the applications therefor, was 68.6 per cent.

During the last ten years the proportions were as follows:

Years.....	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
Per cent.....	68.8..	73.3..	64.1..	71.8..	75.6..	70.1..	69.8..	68.9..	63.2..	68.6..

The proportion of *divorces granted*, in 1910, to the whole number of marriages, during the same year, was *one divorce* to every nine and one-tenth marriages.

The proportion of *applications for divorce* to whole number of marriages, during the year, was one *application* to every six marriages.

The following table shows the number of divorces granted in each county, and the whole State, in each of the last forty-two years, and the proportion of marriages to each divorce granted in each year:

TABLE XLV.

The ratio of divorces granted in the entire State, during 1910, to the whole number of marriages during the same year, was one divorce to every nine and one-tenth marriages, as previously stated.

During the ten years, 1869 to 1878, inclusive, the ratio of divorce to number of marriages was one divorce to every thirteen; during the ten years, 1879 to 1888, inclusive, the ratio was one divorce to ten and three-tenths marriages.

The average of the last ten years was one divorce to every ten and six-tenths marriages.

During the forty-two years, 1869 to 1910, the average proportions of divorce to marriage, in the several counties and the State, were as follows:

Bristol County.....	One divorce to every 19.2 marriages.
Kent County.....	One divorce to every 13.7 marriages.
Newport County.....	One divorce to every 22.6 marriages.
Providence County.....	One divorce to every 10.7 marriages.
Washington County.....	One divorce to every 12.0 marriages.
Whole State.....	One divorce to every 11.1 marriages.

DEATHS, 1910.

The number of deaths registered in Rhode Island during 1910, according to the returns made to the State Registrar, was nine thousand two hundred and ninety-eight (9,298).

This number is larger by 1,021 than that of 1909.

The death rate (17.1 in every 1,000 living persons) was 1.5 higher than that of the previous year.

The following summary will show the death rates per 1,000, for each of the last five census years, in comparison with the last five years:

1885,	1890,	1895,	1900,	1905,	1906,	1907,	1908,	1909,	1910.
17.7.....	20.7.....	19.6.....	20.6.....	17.1.....	17.6.....	18.0.....	16.2.....	15.6.....	17.1.

On the following page will be found the death rates, by counties, for fifty years.

TABLE XLVII.

Death rates per 1,000 living, by counties, for fifty years, from 1861 to 1910, inclusive, also the average rate of each period of five years from 1861 to 1910, inclusive, for the whole State.

SEX OF DECEDENTS.

Of the 9,298 persons whose deaths were returned during the year 1910, 4,848 were males and 4,450 were females; the ratio standing at 109 males to each 100 females, or about 521 males and 479 females in every 1,000 decedents.

The following table will show the number and proportion of males and females among the *decedents* in Rhode Island during the ten years, 1853 to 1862, inclusive; also in each of the forty-eight years from 1863 to 1910, inclusive, and for the entire period of fifty-eight years:

SEASON AND MORTALITY.

The whole number of decedents, and the sex of the same, in each month of the year 1910, and in each division of the State, may be found in Table V, on the tenth and eleventh pages.

The influence of season upon mortality may be further illustrated by the following table, which shows the number and percentage of deaths, compared with the whole number of deaths, in each quarter of each of the last five years, and in the aggregate for fifty-five years, 1853 to 1907, inclusive:

TABLE L.

SEASON.	1906.		1907.		1908.		1909.		1910.		55 years, 1853-1907.	
	Number.	Per cent.	Number.	Per cent.	Number.	Per cent.	Number.	Per cent.	Number.	Per cent.	Number.	Per cent.
January-March..	2,174	25.24	2,605	28.91	2,405	29.09	2,191	26.47	2,570	27.64	68,970	25.13
April-June	2,093	24.30	2,081	23.10	1,983	23.99	1,984	23.97	2,255	24.25	61,174	22.29
July-September.	2,274	26.41	2,232	24.77	2,083	25.20	2,144	25.90	2,388	25.68	77,219	28.13
October-Dec....	2,071	24.05	2,092	23.22	1,796	21.72	1,953	23.66	2,085	22.43	67,121	24.45*
Total.....	8,612	100.00	9,010	100.00	8,267	100.00	8,277	100.00	9,208	100.00	274,484	100.00

Comparing the percentages of 1910 with those of the fifty-five years, we find that of the first quarter is 2.51 per cent. greater; the second quarter is 1.96 per cent. greater; the third quarter, 2.45 per cent. less; and the last quarter 2.02 per cent. less than for the average of the fifty-five years. The greatest mortality for any one season has been usually found in the third quarter, but since 1902, the greatest mortality has been in the first quarter.

TABLE II.

Showing the Months in the Order of Largest Mortality for Eight Years.

NATIVITY OF DECEDENTS.

There may be found in Table I, on pages 2-5, the number of decedents in 1910, by division of the two classes of native and foreign born.

Of the whole number of decedents, 9,298, 6,472 were native born, that is, were born in the United States, and 2,826 were born outside of the United States.

PARENTAGE OF DECEDENTS.

Of the whole number of decedents, 9,298, reported in 1910, 3,546 were of native and 5,752 were of foreign and unknown parentage.

By the term "*foreign parentage*" is meant the decedents whose *fathers* were born in some other country and not in the United States. The grandchildren of the foreign born are reckoned as of native parentage, if their fathers were born in the United States.

The following towns and cities, reported a larger number of decedents of foreign *parentage* than of native, namely: Bristol, Warren, Warwick, Newport City, Tiverton, Burrillville, Central Falls, Cranston, Cumberland, Johnston, Lincoln, North Providence, Pawtucket, Providence, Smithfield, and Woonsocket.

These numbers varied from a moderate excess to three or four times as many of foreign as of native *parentage*.

The following table gives the number and proportion in every one thousand deaths of decedents of native and of foreign *parentage* in each of the last five years; and in the aggregate for fifty years, or from 1859 to 1908, inclusive:

TABLE LII.

PARENTAGE.	1910.		1909.		1908.		1907.		1906.		50 years, 1859-1908.	
	Number.	Per 1,000.	Number.	Per 1,000.	Number.	Per 1,000.	Number.	Per 1,000.	Number.	Per 1,000.	Number.	Per 1,000.
Native.	3,546	381.4	3,168	382.7	3,150	381.0	3,543	393.2	3,313	384.7	136,733	475.1
Foreign.	5,752	618.6	5,109	617.3	5,117	619.0	5,467	606.8	5,299	615.3	151,082	524.9
Total.	9,298	1000.0	8,277	1000.0	8,267	1000.0	9,010	1000.0	8,612	1000.0	287,821	1000.0

AGE OF DECEDENTS.

In Table I, on pages 2-5, may be found the aggregate and average age of all the decedents whose deaths occurred in 1910, and with the age of each sex in each town and county in the State.

By that table it will be seen that the average age of all the male decedents in the State, in 1910, was 35.03 years, and that the average age of all the female decedents, in the same year, was 38.30 years; the average of all decedents, of both sexes, was 36.59 years.

The following table will present, separately, the average age of the male and female decedents, and the average age of all decedents, in each year for fifty years; also the average age in ten periods of five years each, from 1861 to 1910, inclusive:

TABLE LIII.

1909.....	36.30	39.82	38.03	
1910.....	35.03	38.30	36.59	

The above table shows that the average longevity of the decedents in Rhode Island increased nearly eight years during the period of fifty years, ending with 1910.

The following table will present some of the facts of the preceding as occurring in the different divisions of the State, as well as of the State at large. It will show the average age of the decedents in each of the larger divisions of the State, in each of the last four years, and also the average of each of five periods of five years each, and two periods of ten, comprising the forty-five years from 1863 to 1907, inclusive:

TABLE LIV.

DIVISIONS OF THE STATE.	1910.	1909.	1908.	1907.	1903-1907, 5 years.	1898-1902, 5 years.	1893-1897, 5 years.	1888-1892, 5 years.	1883-1887, 5 years.	1873-1882, 10 years.	1863-1872, 10 years.
Bristol County.....	32.90	41.99	44.66	38.15	39.14	39.74	42.78	39.76	38.45	35.15	34.59

By reference to Table LIV, it will be seen that the average age of all decedents during the last five years is nearly six years greater than the first period of ten years, 1863-1872.

PERCENTAGE OF DECEDENTS BY DIFFERENT AGES.

In Table VI, on pages 12 to 19, inclusive, will be found the number of deaths in 1910, in each town and each county, of each sex, and in each period of life, with the percentage of the whole number of deaths in each division to the population of the same, according to the population for 1910.

The following table shows the percentage of decedents in each division of ages, to whole number of deaths, in each of the last four years, and in the aggregate for five periods: one of twenty years and seven months, from June 1st, 1852, to December 31, 1872, inclusive; one of ten years, from 1873 to 1882, inclusive; one of ten years, from 1883 to 1892; one of ten years, from 1893 to 1902, and one of five years, from 1903 to 1907:

TABLE LV.

Compared with the average of twenty years, ending with 1872, the average proportion of the mortality of children under one year of age, during the last five years, was 4.0 per cent., or 40 in every one thousand deaths greater than the average in the longer period.

The proportions in the other periods were not greatly different from previous years, although there was a steady increase of percentage in the age period above fifty years.

The following table will present the varying proportions of deaths to whole number of deaths, in four different periods of life, from 50 years of age to 90 years, grouped in five periods of averages of ten years each, 1853-1902; and also in each of the last eight years.

1909.....	52.9.....	64.1.....	55.7.....
1910.....	42.6.....	40.5.....	39.9.....

In every one thousand of the colored population there were, in 1910:

Of Births.	Of Persons Married.	Of Deaths.
2.34.....	25.9.....	25.1.....

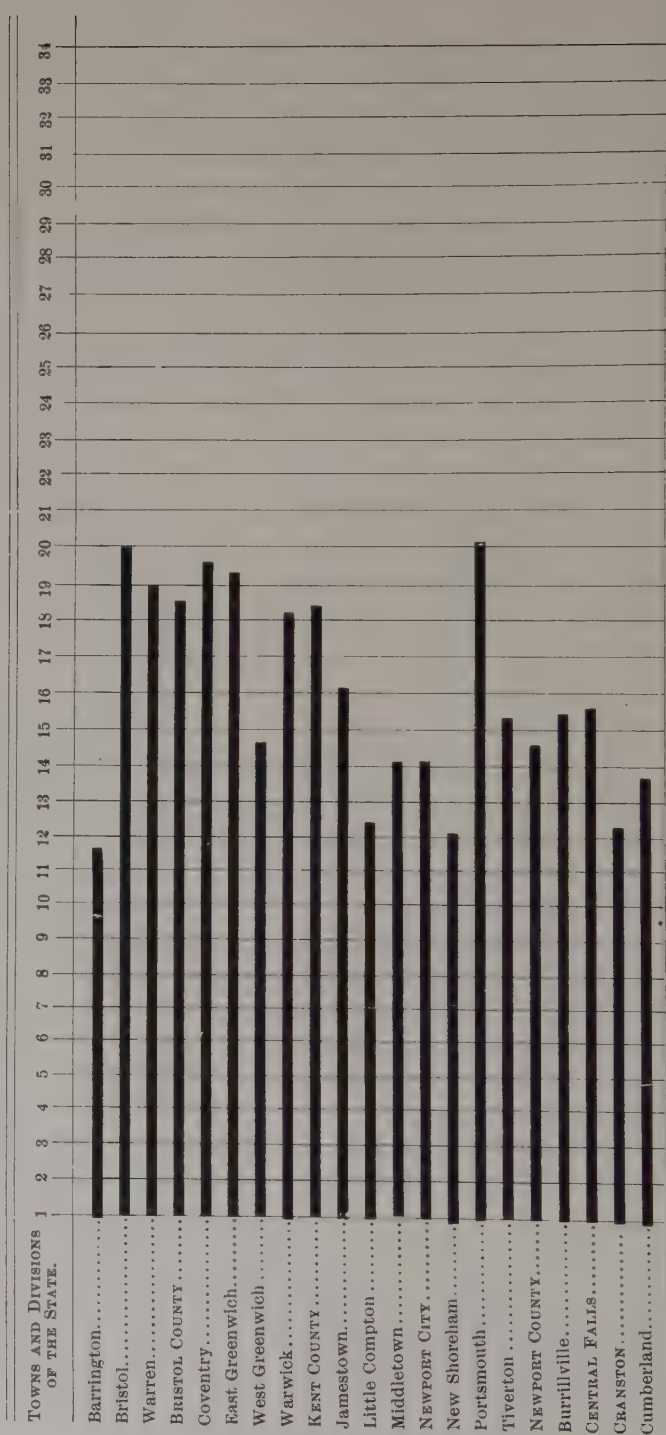

The following exhibit will show the number of living births, marriages, and deaths among the colored population of Rhode Island, during ten years, from 1861 to 1870, inclusive; ten years, from 1871 to 1880, inclusive; ten years, from 1881 to 1890, inclusive; ten years, from 1891 to 1900, inclusive; for the years 1901, 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909 and 1910 and the aggregate of the same:

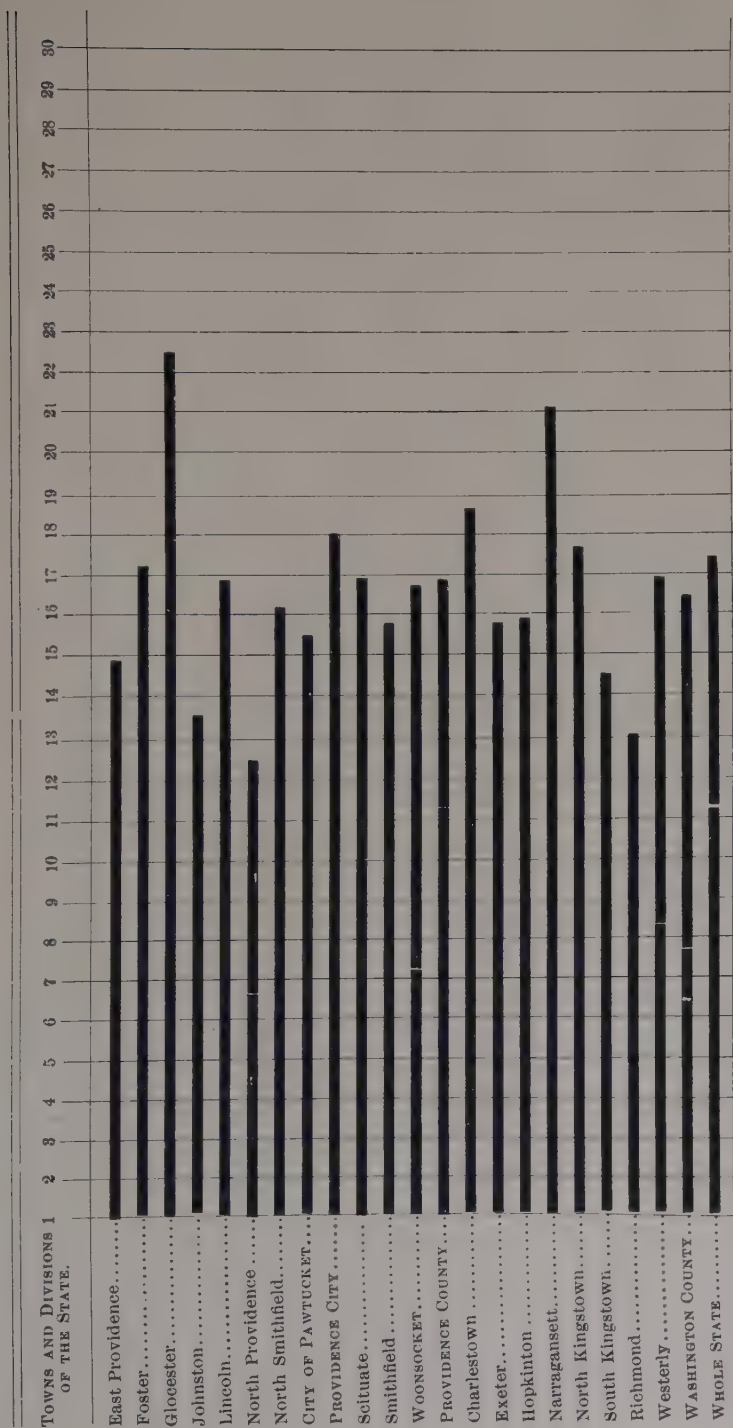

10 years, 1861-1870.....	1,131 births.....	557 marriages.....	1,153 deaths.
10 years, 1871-1880.....	1,615 births.....	705 marriages.....	1,573 deaths.
10 years, 1881-1890.....	1,954 births.....	752 marriages.....	1,860 deaths.
10 years, 1891-1900.....	2,080 births.....	957 marriages.....	2,218 deaths.
1901.....	252 births.....	103 marriages.....	257 deaths.
1902.....	211 births.....	116 marriages.....	243 deaths.
1903.....	208 births.....	124 marriages.....	279 deaths.
1904.....	242 births.....	113 marriages.....	285 deaths.
1905.....	221 births.....	128 marriages.....	291 deaths.
1906.....	237 births.....	107 marriages.....	255 deaths.
1907.....	245 births.....	114 marriages.....	254 deaths.
1908.....	243 births.....	138 marriages.....	239 deaths.
1909.....	258 births.....	111 marriages.....	245 deaths.
1910.....	230 births.....	127 marriages.....	246 deaths.
Total, 50 years.....	9,127 births.....	4,482 marriages.....	9,398 deaths.

DEATH RATES.

Diagram II. — Showing the Number of Deaths in every 1,000 of the Population, in each Town and each County in the State, during the Year 1910.

For explanation see foot-note on next page.

The figures at the top of the perpendicular lines indicate, in whole numbers, the number of deaths during the year in every 1,000 persons. The spaces are fractional parts of one. For instance, the heavy horizontal line against Barrington, at the top of this diagram, reaches across eight-tenths of the space between the perpendicular lines 11 and 12. It shows the death rate of Barrington, in 1910, was eleven and eight-tenths in every 1,000 of the population.

CAUSES OF DEATH, 1910.

The statistics of the causes of death in Rhode Island, in 1910, may be found in Tables VII, VIII, IX, and X. The whole number of deaths, as previously stated, was 9,298, which was larger by 1,021 than the number returned in 1909. The number of which the cause of death was reported was 9,262, and the number of which the cause was not stated was 36.

1. *Typhoid Fever.* The following table exhibits, for the last forty-five years, the number and percentage, the sex and parentage, of the decedents from typhoid fever, and the number in each division of the State:

Mortality in the State from Typhoid Fever, 1866 to 1910, inclusive.

YEARS.	Number of Deaths.	Per cent.	SEX.		PARENTAGE.		DIVISIONS OF THE STATE.

*Exclusive of Providence city.

During 1910, of the 75 decedents from typhoid fever, there were 51 males and 24 females.

During the period of forty-five years, 1866 to 1910, inclusive, the proportions of the sexes of the decedents from typhoid fever in the State were 90 females to every 100 males.

The following table shows the number of decedents from typhoid fever, in each division of ages, in the last forty-five years, in the State of Rhode Island in four ten year periods, and for each of the last five years.

Mortality from Typhoid Fever in Age Periods.

4. *Malarial Fever.* There were but 4 deaths from malarial fever, in 1910, 4 males and 2 females. One of these deaths occurred in Kent county, one in Providence county, one in Providence city, and one in Woonsocket. Few deaths are at present reported from malaria, and the most of these deaths are probably due to some other cause.

6. *Measles.* There were 186 decedents from measles as a cause of death in 1910, as against 63 in 1909. This number represents 2.0 per cent. of all causes. Of the 186, there were 90 males and 96 females. Of parentage, there were 53 of native and 133 of foreign. During the last ten years the proportion of mortality from measles has been about 41 of native to every 100 of foreign parentage. The number of decedents under 5 years of age was 172. The number in the different divisions of the State may be found in the following table:

Mortality in the State from Measles, 1866 to 1910, inclusive.

YEARS.	Number of Deaths.	Per cent.	SEX.		PARENTAGE.		DIVISIONS OF THE STATE.

7. *Scarlet Fever.* The number of deaths returned as having been caused by scarlet fever, in 1910, was 22. The number is nine less than that of 1909. This number represents 0.2 per cent. of all causes, and a proportion of .04 to every 1,000 of the population.

The following table will present the statistics of scarlet fever for the last fifty-five years, from 1856 to 1910, inclusive, the number and percentage and sex of the decedents from scarlet fever, and the number from scarlet fever in each division of the State. It also shows, from 1866 to 1910, inclusive, the parentage of the decedents from scarlet fever:

Mortality in the State from Scarlet Fever, 1856 to 1910, inclusive.

8. *Whooping Cough.* The following table shows the deaths from this disease for 45 years, in periods of five years, 1866-1910, inclusive, with the death rate, sex, parentage, etc., of the decedents. In 1910, there were 56 deaths, which was 7 less than in 1909. All of the decedents but 2 were under 5 years of age.

Mortality in the State from Whooping Cough, 1866 to 1910, inclusive.

*Exclusive of Providence city.

9. *Diphtheria.* The number of deaths from diphtheria, in 1910, was 126, which was 26 more than in 1909. This number represents 1.3 per cent. of all causes, or a proportion of .23 to every 1,000 of the population.

There were 31 deaths from diphtheria in the first quarter, 26 in the second, 21 in the third, and 48 in the fourth. Twenty deaths from membranous croup are included in the above number. There were 88 deaths under 5 years of age, 27 between 5 and 10, 7 between 10 and 15, 2 between 20 and 40, and 2 between 40 and 50.

The following table shows the mortality in the State from diphtheria for forty years, in 5-year periods, beginning with 1866, and also for each of the last five years; also the percentage of deaths, the sex, parentage, etc.:

Mortality in the State from Diphtheria, 1866 to 1910.

10. *Influenza.* The event, during the first four months of the year 1890, of a very extraordinary and perhaps unprecedented prevalence of a form of influenza, which was unlike that of ordinary occurrence in that it affected indiscriminately all the functions and nearly all the organs of the body, varying with the individuals attacked, and the re-appearance of the same, although in greatly lessened numbers, in 1891, warrants a continued notice, not given previous to 1890 in the Registration Reports, to the affection so named.

The following table will show the proportionate nativity, sex, and locality of the disease for the past twenty-one years.

The greatest mortality appears to be among females, there being 152 females to every 100 males. The parentage appears to be nearly equally divided between native and foreign, there being 103 foreign to 100 native.

The largest number of deaths occurred in Providence city, but this is not out of proportion to the proportionate number and density of population.

Mortality in the State from Influenza, 1890 to 1910, inclusive.

*Exclusive of Providence city.

14. *Dysentery.* There were 37 deaths with dysentery given as the cause in 1910. It has been the custom to place dysentery in table with diarrhea and enteritis, and that table will be found under numbers 105 and 106 of this report.

18. *Erysipelas.* There were 17 deaths from erysipelas in 1910. Of these 9 were males and 8 were females. Of the parentage, 7 were native and 10 foreign.

19. *Other Epidemic Diseases.* Under this heading has been placed 3 deaths, 1 from parotitis, 1 from varicella, and 1 from rubcola.

20. *Purulent Septicemia and Infection.* There were but 7 deaths from this cause, in 1910, for which no cause was known.

26. There were 4 deaths from pellagra, all of which occurred at the State Institutions.

28. *Tuberculosis of Lungs.* There were 831 deaths from this cause in 1910. Of these 3 were from tuberculous laryngitis.

28, 29, 30, 31, 32, 33, 35, 35. *Tuberculous Diseases.* There were 151 deaths from tuberculous diseases other than tuberculosis of lungs, in 1910. These include tuberculosis of meninges, abdominal tuberculosis, Pott's disease, tuberculosis of other organs, and general tuberculosis. This makes the total number of deaths from tuberculosis, in 1910, 982. This number is larger by 35 than in 1909. The whole number, 982, represents 10.6 per cent. of *all causes*, and a proportion of 1.8 to every 1,000 of the *population*. Of these 982 decedents, 532 were males and 450 were females. There were 258 decedents of native parentage and 724 of foreign. The largest number, 100, occurred in April; the next largest, 98, in May; the smallest, 64, in September. During 1910, of the decedents from tuberculous diseases, 216, or nearly one-fifth, were between the ages of 20 and 30 years; and 221 were between the ages of 30 and 40.

In order to show more concisely the relation of age to mortality from consumption, during 1910, the following age periods and numbers are presented:

Under 10 years of age.....	136
Between 10 and 20 years.....	88
Between 20 and 30 years.....	216
Between 30 and 40 years.....	221
Between 40 and 50 years.....	153
Between 50 and 70 years.....	147
Over 70 years.....	21
Total.....	982

The following table shows the total deaths from all reported *known causes*, with the *number* and *parentage* of deaths from consumption, of the same in each of the large divisions of the State, and in the whole State, *in each of the last ten years*, and also the aggregate for a period of fifty years, from 1861 to 1910, inclusive:

Woonsocket.....	489.....	or.....2.05
Washington County.....	924.....	or.....1.08
Whole State.....	552.....	or.....1.81

37. *Syphilis*. There were 33 deaths from syphilis, in 1910, and of these, 20 were specified as congenital.

38. *Gonococcus Infection*. Two deaths occurred from this cause in 1910, both of infants, and a result of ophthalmia.

39 to 45. *Cancer*. There were 474 decedents, in 1910, whose deaths were caused by cancer, according to the returns. This number represents 5.10 per cent. of *all causes*, and a proportion of .87 to every one thousand of the *population*. The varieties of cancer, as reported, may be found in Tables VII and VIII, and they are classed in Table IX, as follows: Cancer of the buccal cavity, 29; cancer of stomach and liver, 158; cancer of peritoneum, intestines, and rectum, 72; cancer of the female genital organs, 75; cancer of breast, 49; cancer of skin, 23; cancer of other organs, 68.

The following Table will show the facts of mortality from cancer, in relation to sex, parentage, and locality, for forty years, by periods of ten years, and for each of the last five years:

Mortality in the State from Cancer, 1866 to 1910, inclusive.

YEARS.	Number of Deaths.	Per cent.	SEX.		PARENTAGE.		DIVISIONS OF THE STATE.

*Exclusive of Providence city.

47 and 48. *Rheumatism*. There were 24 deaths from acute articular rheumatism, and 10 from chronic rheumatism and gout, recorded in 1910.

50. *Diabetes*. In 1910 there were 103 deaths from diabetes, as against 81 in 1909 and 72 in 1908.

56. *Alcoholism*. There were 58 deaths in 1910 from alcoholism, 6 more than the number in 1909. The following Table shows the mortality in the State from alcoholism for forty-five years, in five-year periods, with percentage to deaths from all causes, sex, parentage, etc., from 1866 to 1910, inclusive:

Mortality in the State from Alcoholism, with the Percentage of the Whole Number of Deaths, Sex, Parentage, and Locality, for forty-five years, from 1866 to 1910, inclusive.

* Exclusive of Providence city.

61 a. *Cerebro-Spinal Meningitis*. In 1910, 34 deaths were reported from this cause. Of these there were 15 males and 19 females. The parentage of 12 was native, and of 22 was foreign.

64. *Apoplexy*. There were 535 deaths from apoplexy, including cerebral hemorrhage, in Rhode Island, in 1910, according to the returns. The number reported is 19 more than in the year 1909.

The whole number of deaths from apoplexy represents 5.75 per cent. of all causes, and a proportion of .99 to every one thousand of the population.

The following Table will present the sex, parental and local relations of apoplexy, including cerebral hemorrhage, as cause of death, during forty years, from 1866 to 1905, in periods of five years, and for each year since 1905:

Mortality in the State from Apoplexy, 1866 to 1910, inclusive.

60, 61, 61a, 65, 69, and 71. Deaths under the foregoing numbers have been placed in the following Table, as has been the custom for forty-five years, under the heading "Brain Diseases." The number in 1910 was 144. This number represents 1.55 per cent. of *all causes*, and .26 to every one thousand of the whole population.

Brain diseases occur largely in children. Of the 144 decedents from those causes, 86 were under five years of age. The following Table will present the statistics of mortality from diseases of the brain for forty-five years in four periods of ten years each, and for each of the last five years:

Mortality in the State from Brain Diseases, with the Percentage, Sex, Parentage, and Locality, for forty-five years, from 1866 to 1910, inclusive.

91, 92. *Pneumonia*. There were 312 deaths reported, in 1910, from broncho-pneumonia and 781 from pneumonia, making a total of 1,093. All have been placed under pneumonia, as there are many cases of broncho-pneumonia which are reported simply as pneumonia.

Broncho-pneumonia and pneumonia may be found considered separately in Table IX of this report, but in the following Table they are tabulated together.

There were, of broncho-pneumonia and pneumonia, 1,093 deaths in 1910, which number is larger by 266 than that of the previous year. This number represents 11.7 per cent. of *all causes*, and a proportion of 1.1 to every one thousand of the population.

By *season*, 618, or more than one-half of the deaths from pneumonia, occurred during the first four months of the year; the largest mortality being in March.

The following Table presents, in periods of five years, for forty-five years, the number and the percentage, with the sex and the parentage, of the decedents from pneumonia in each division of the State:

Mortality in the State from Pneumonia, 1866 to 1910, inclusive.

*Exclusive of Providence city.

104. *Diarrhea and Enteritis* (under 2 years). There were, in 1910, 811 deaths from these causes. This number represents 8.72 per cent. of deaths from *all causes*, and a proportion of 1.49 to every one thousand of the *population*. Of sex, there were 441 males and 370 females; and of parentage there were 256 of native and 555 of foreign. As may be seen in the following Table, the number of deaths from *cholera infantum* (diarrhea and enteritis) during the forty-five years, from 1866 to 1910, inclusive, was 18,295. The proportion to the whole mortality was 6.67 per cent.

The following Table shows the whole number of reported deaths from diarrhea and enteritis (under 2 years), or *cholera infantum*; the sex and parentage of the decedents; and the number in each of the larger divisions of the State, by periods of five years for forty-five years, and for each of the last five years:

Mortality in the State from Cholera Infantum, 1866 to 1910, inclusive.

YEARS.	Number of Deaths.	Per cent.	SEX.		PARENTAGE.		DIVISIONS OF THE STATE.

*Exclusive of Providence city.

106. *Diarrhea and Enteritis* (2 years and over). There were 108 deaths from these causes in 1910. Of the 108, 49 were males and 59 were females; and of parentage, 34 were native and 74 were foreign. As to age, 28 of the decedents were under 5 years, and 58 were over 50 years, leaving 22 between the ages of 5 and 50 years. 48 of the above deaths occurred in July, August, and September. It has been the custom to include all deaths from *dysentery* in the following Table. The deaths from dysentery in 1910 numbered 37, and 9 of these decedents were under two years of age.

The following Table will show the deaths from diarrhea and dysentery, with percentage, sex, parentage, etc., by periods of five years for forty-five years, and for each of the last five years:

Mortality in the State from Diarrhea (Enteritis) and Dysentery, 1866 to 1910, inclusive.

YEARS.	Number of Deaths. Per cent.		SEX.		PARENTAGE.		DIVISIONS OF THE STATE.

* Exclusive of Providence City.

108. *Appendicitis.* During 1910 there were 55 deaths from this cause, and of this number operations were performed in 46 cases. Of the 55 deaths from appendicitis, 32 were males and 23 females; 18 were of native and 37 of foreign parentage.

109. *Hernia.* There were 26 deaths attributed to hernia in 1910. Of these, 1 was femoral; 8, inguinal; 5, umbilical; and 12 with the location not given.

Of sex, 14 were males and 12 were females, and operations were performed in 16 cases.

111, 113, 114, and 115 have been combined under one heading to make up the table of *Liver Diseases*, as has been the custom heretofore. There were 104 deaths from diseases of the liver in 1910, as against 94 in 1909. This number represents 1.12 of all causes, and a proportion of .19 to every one thousand of the population.

The following Table will present various facts in relation to diseases of the liver for forty-five years, in four periods of ten years each, and for each of the last five years:

Mortality from Diseases of the Liver, 1866 to 1910, inclusive.

YEARS.	Number of Deaths.	Per cent.	SEX.		PARENTAGE.		DIVISIONS OF THE STATE.

*Exclusive of Providence city,

117. *Peritonitis.* There were, in 1910, 10 deaths from peritonitis, in which no cause was specified or known. Of this number 5 were males and 5 were females; of parentage, 3 were native and 7 were foreign.

119. *Acute Nephritis.* There were 99 deaths from acute nephritis in 1910, as against 93 in 1909.

120. *Chronic Nephritis.* In 1910 there were 563 deaths from chronic nephritis.

122. *Other Diseases of the Kidneys.* In 1910, 4 deaths were tabulated under this title: perinephritic abscess, 2; and pyelonephrosis, 2.

119, 120, and 122 have been combined in the following Table under the title of *Kidney Diseases*, which Table will present various facts, in relation to the mortality from diseases of the kidneys in Rhode Island by periods of five years, for forty-five years, and for the last five years:

Mortality in the State from Kidney Diseases, 1866 to 1910, inclusive.

YEARS.	Number of Deaths.	Per cent.	SEX.		PARENTAGE.		DIVISIONS OF THE STATE.

*Exclusive of Providence city.

129. *Uterine Tumor.* There were 12 deaths from this cause in 1910, all due to fibroid tumors.

131. *Cysts and other Tumors of the Ovary.* In 1910, 10 deaths were tabulated under this title, all of which were given as ovarian cysts.

134. *Accidents of Pregnancy.* There were 6 deaths under this cause recorded in 1910, of which 4 were due to miscarriage, 1 to pernicious vomiting of pregnancy, and 1 to ruptured tubal pregnancy.

135. *Puerperal Hemorrhage.* There occurred 6 deaths from this cause in 1910, 3 deaths from post-partum hemorrhage, and 3 from placenta previa.

136. *Other Accidents of Labor.* Of the 5 deaths recorded under this title, 2 were from rupture of uterus, 1 from rupture of vagina, 1 from inversion of uterus, and 1 from cæsarean section.

137. *Puerperal Septicemia.* From this cause there were 28 deaths in 1910: 21 from septicemia; 6 from peritonitis, and 1 from puerperal pelvic cellulitis.

138. *Puerperal Albuminuria and Convulsions.* There were 34 deaths from this cause.

139. *Puerperal Phlegmasia Alba Dolens, Embolus, Sudden Death.* Three deaths occurred from puerperal embolism in 1910.

140. *Other Puerperal Accidents.* Under this title 2 deaths, not otherwise defined, were tabulated in 1910.

134, 135, 136, 137, 138, 139, and 140 have been combined to make up the total of deaths under childbirth, and may be found, in the following Table, for the year 1910, and for the last forty-five years.

Mortality in the State from Child-birth, with the Percentage of the Whole Number of Deaths, Percentage, and Locality, for forty-five years, from 1866 to 1910, inclusive.

*Exclusive of Providence city

142. *Gangrene.* Of the 15 deaths from this cause in 1910: 14 were from gangrene of foot, of which 13 were senile, and 1 from gangrene of leg.

144. *Acute Abscess. Phlegmon.* There were 4 deaths under this head in 1910.

145. *Diseases of the Skin.* There were 8 deaths from this cause in 1910; 3, dermatitis, with exfoliation; 3 pemphigus neonatorum; 1, cellulitis of neck; and 1 scabies with general septicemia.

146. *Diseases of the Bones.* There were 10 deaths tabulated under this title, specified as follows: mastoiditis, 5; osteomyelitis, 1; periostitis, 1, and necrosis of jaw, 3.

150. *Congenital Malformations.* In 1910 there were 87 deaths in this class. Of these, 2 were specified as hydrocephalus; 1, meningocoele; 1, anencephalus; 64, malformation of heart, of which number thirty-two were open foramen ovale; 8, spina bifida; 3, malformation

of mouth; 3, imperforate anus; 2, malformation of kidney; 2, malformation of esophagus; and 1 malformation of bile duct.

151. *Premature Birth.* In 1910 there were 232 deaths from this cause. The number of deaths from this cause has greatly increased in the last few years, and this is probably due to greater accuracy in registration.

151-2. *Congenital Debility.* Deaths of children under one year of age only are tabulated under this title. There were 194 tabulated under this head in 1910: 93, to malassimilation; 18, to icterus neonatorum; and 83, congenital debility, with no cause known or obtainable.

152. *Other Diseases of Early Infancy.* There were 91 deaths tabulated under this title in 1910. Of these, 17 were due to asphyxia neonatorum; 15 to atelectasis pulmonum; 4, to septic inflammation of umbilicus; 6, to umbilical hemorrhage; 4, to hemorrhage from intestines; 2, to hemorrhage from stomach; 4, to spontaneous and general hemorrhage, and 39 to difficult and prolonged labor.

154. *Old Age. Senile Debility.* The number of deaths, in 1910, attributed to old age as a cause, was 195; of these, 26 were recorded as senile dementia. The number of deaths (195) represents 2.10 per cent. of *all causes*, and a proportion of .36 to every one thousand of the population. As to sex, 74 were males and 121 were females; and of parentage, 101 were of native, and 94 of foreign.

155. *Suicide by Poison.* Of the 12 deaths tabulated under this title, 1 was ascribed to arsenate of lead; 1 to carbolic acid; 5 to cyanide potassium; 2 to Paris green; 1 to "rat poison;" 1 to strychnine; and 1 to sulphuric acid.

156. *Suicide by Asphyxia.* All of the deaths, in 1910, placed under this title were from illuminating gas. The number was 14.

157. *Suicide by Hanging.* There were 14 suicides by hanging, in 1910.

158. *Suicide by Drowning.* The suicides by drowning numbered 11, in 1910.

159. *Suicide by Firearms.* In 1910, 24 people committed suicide by shooting.

160. *Suicide by Cutting-Instruments.* There were 7 suicides by cutting the throat.

161. *Suicide by Jumping from High Places.* There was 1 death from this cause, in 1910, by jumping from window.

Mortality in the State from Suicide, 1886 to 1910, inclusive.

*Exclusive of Providence city.

165. *Acute Poisonings.* There were 16 deaths from this cause in 1910. Of these 3 were due to drinking wood alcohol; 2 to carbolic acid; 3 to taking oil of wintergreen, instead of essence; 1 by Paris green, mistaken in the dark for ginger; 1 by overdose of chloroform taken to induce sleep; 1 by extract of colchicum; 1 by overdose of cough medicine; 1 child swallowed a solution of caustic potash, another ate strychnine pills, and 2 children swallowed some kind of poison taken from a dump.

167. *Burns and Scalds.* There were 55 deaths tabulated under this title in 1910, which were described as follows: By clothes taking fire from stove, 7; from fireplace, 1; playing with matches, 9; in burning building, 4; from camp fire, 1; by bonfire, 4 (1 adult and 3 children); in grass fire, 1 (adult); while lighting fire with kerosene, 3; from overturned kerosene lamp, 5; by clothes taking fire from match while lighting lamp, 1; while thawing a frozen water-pipe, 1; by explosion of gasoline while cleaning clothes, 1; from explosion of tank, 1; by red hot iron which slipped and passed through thigh, 1 (an iron

worker); burned by potash in bleachery, 1; by steam from broken steam-pipe, 1; by falling into tub of hot water, 7 (children); by upset kettle of hot water, 4 (children); burned by hot water bottle, 1; and 1, circumstances unknown.

168. *Absorption of Deleterious Gases.* Of the deaths from this cause in 1910 there were 19, all due to illuminating gas.

169. *Accidental Drowning.* There occurred in Rhode Island in 1910, 71 deaths from accidental drowning. These have been classed as follows: While bathing or swimming, 14 (five of these were under 20 years of age); through ice, 2; diving, struck head against a stump, 1; from canoe which became impaled upon a stake, 1; from motor-boat, 1; from capsized boats, 12; in attempting to rescue another man, 1; fishing from boats, 3; fishing from rock, 1; off dock, 2; while gathering quahaugs, slipped into deep water, 1; children playing on bank or pier, 10; by falling into well, 1 (child); by falling into cistern, 1 (child); by falling into abandoned gasometer, 1 (child); by falling into catch-basin while looking for lost ball, 1; new-born into water closet, 1; and 17 found in water, circumstances of drowning unknown.

170. *Traumatism by Firearms.* The 4 deaths in this class were described as follows: Boy out hunting was accidentally shot by companion; a boy playing with rifle shot himself in breast; another boy accidentally shoots younger brother; and a young man while cleaning revolver shoots himself in breast.

172. *Traumatism by Fall.* There were 96 deaths in 1910 caused by falls, which were specified as follows: Downstairs or steps, 17; on ice, 3; from building or staging, 8; from ladder, 2; from window, 11 (ten adults and one child); from tree, 5; from bridge, 2; from bed, 3; from chair, 2; on floor, ground or sidewalk, 33; from electric pole, 1; from load of hay, 1; from hay mow, 1; into coal pocket, 1; into hold of vessel, 1; in boat over oar-lock, 1; from platform to coal barge, 1; off coal run, 1; from boiler, 1; from loaded team, 1. Of the forty-four persons over 60 years of age who died as the result of falls, thirty-four sustained fractured hips.

174. *Traumatism by Machines.* There were 7 deaths ascribed to this cause in 1910. Two persons were whirled over shafting in mill; 1 was caught in fly-wheel; 1 was killed by bursting of fly-wheel; 1 by falling into machinery; 1 crushed by heavy piece of machinery; and 1 was hit in abdomen by stick while shifting belt.

175. *Traumatism by Other Crushing.*

A. *Railroad Accidents.* There were 30 deaths from this cause in 1910. Of the employees, 4 (a conductor and three brakemen) while switching were run over; 1 was struck by overhead bridge; 3 were

struck by train; 22 classed as trespassers were killed; this includes men and boys walking on tracks or stealing rides on cars, children playing on tracks and two women walking on or near tracks.

B. *Electric Car.* There were 17 deaths from electric car accidents in 1910. Six were run over by cars (3 adults and 3 children); 2 were struck by car; 3 fell from moving car; 1 in collision of cars; 1 in collision with car while riding motorcycle; in collision of car with cart, driver thrown, 1; trying to board moving car, 1; hit by pole or tree while riding on car, 1; by running in front of car, 1 (child).

C. *Automobile.* Under this title 20 deaths were recorded in 1910. Struck and knocked down by automobile, 12; run over, 3; by stepping from moving machine, 1; by overturned machine, 1; 1 was thrown from automobile, and 2 children were killed by running in front of machines.

D. *Other Vehicles.* Under this head 17 deaths were recorded. Thrown from teams they were driving, 4; from carriage in runaway, 2; run over or thrown from heavy teams, 6; in trying to stop runaway teams, 2; besides these 3 elevator accidents have been included in this class; crushed by elevator, 1; fell down elevator well, 1; and 1 caught between floor and elevator.

E. *Landslide.* By caving of sand bank into ditch man was digging, 1.

176. *Injuries by Animals.* There were 6 deaths from this cause in 1910. Five were from kicks by horses and one in playing polo received injuries causing death by colliding with another mount.

178. *Excessive Cold.* From exposure to cold and its results are recorded the deaths of 6 people.

179. *Effects of Heat.* Fifteen deaths were recorded in 1910 as caused by excessive heat.

Mortality in the State from Accidents, with the Percentage of the Whole Number of Deaths, Sex, Parentage, and Locality for forty-five years, from 1866 to 1910, inclusive, in five periods of five years each, and for each of the last five years.

Diagram III. Exhibiting the comparative mortality by absolute number of decedents, from twenty principal causes of death in Rhode Island, in 1910.

* Includes all diarrheal diseases under two years of age.

† Includes all diarrheal diseases over two years of age.

THE RETURNS OF THE MEDICAL EXAMINERS.

The number of deaths investigated by the medical examiners during the year 1910, was 767. These deaths resulted from sudden, suspicious, unknown, and violent causes. Of this number, 552 or 72 per cent., were males, and 215 or 28 per cent., were females.

HOMICIDE.—The number of deaths from homicide was 14, or 1.8 per cent., of the whole number investigated. Of these fourteen deaths, 9 were by shooting; 2, by stab-wounds; 1, by violence to head and chest; 1 infant by strangulation; and 1 infant by drowning (the mother at same time committing suicide.)

SUICIDE.—The number of deaths by suicide reported by the medical examiners in 1910, was 76, or 10 per cent. of the whole number examined. Death was caused as follows: by drowning, 9; by hanging, 12; by illuminating gas, 15; by incised wound of throat, 7; by jumping from window, 1; by shooting, 20; by arsenate of lead, 1; carbolic acid, 1; cyanide potassium, 5; Paris green, 2; "rat poison," 1; strychnine, 1; sulphuric acid, 1.

ACCIDENTS.—The returns of the medical examiners show 339 deaths from accidents specified as follows: asphyxia, 28; by automobiles, 21; burns and scalds, 47; drowning, 71; electric car, 16; by electricity (including one from lightning), 3; by elevator, 2; by exposure to cold, 6; by falls, 64; firearms, 4; insolation, 1; machinery, 9; by poison, 11; by railroad, 33, and 23 by various other accidents.

ASPHYXIA.—By bedclothes and overlying, 4; illuminating gas, 16; choked by piece of meat, 1; by piece of dry bread, 1 (infant); by vomitus, 2 (1 infant and 1 adult); by button behind epiglottis, 1 (child); by position of head while intoxicated, 2; and 1 was suffocated in cave-in of bank while digging sewer.

AUTOMOBILE.—Struck by automobile, 10; thrown from automobile, 1; run over by automobile, 8; by overturned machine, 1, and 1 by stepping from moving machine.

BURNS AND SCALDS.—By clothes taking fire from stove, 7; by kindling fire with kerosene oil or gasoline, 3; from rubbish or grass fires, 4; by upset kerosene lamp, 5; explosion of kerosene lamp, 1; from match while lighting lamp, 1; from a camp fire, 1 (girl); while cleaning clothes with gasoline which ignited from a lighted match, 1; by explosion of stove polish while cleaning hot stove with it, 1; in burning building, 4; from fire used to thaw frozen water-pipes, 1; playing with matches, 7; while passing red-hot iron through machine, rod slipped and passed through thigh, 1; while filling tank of car using lighted lamp, oil exploded, 1; by falling into tub of hot water, 3 (children); by overturned pan or kettle of hot water, 4 (children); by steam from bursted steam-pipe, 1; by steam in bleachery, 1.

DROWNING.—Bathing or swimming, 11; through ice, 2; from upset small boats, 12; playing along bank, fell into water, 7 (children); from motorboat, 1; from raft, 1; while trying to recover drifting boat, 1; fishing from boats, 3; from rock, 1; while getting quahaugs, stepped into channel, 1; overboard from steamer, 1; while mooring boat, 1; by canoe becoming impaled on submerged stake, 1; in water within abandoned gasometer, 2 (children); while trying to drink from spring, 1 (old man); trying to recover ball from catch basin, 1 (child); by falling into cistern, 1; by falling into well, 1; in water closet, was born falling into bowl, 1; in privy vault, 2; and 19 were found in water, circumstances unknown.

ELECTRIC CAR.—While walking on or crossing tracks, 7; while trying to board a moving car, 1; while trying to alight from moving car, 2; by falling from car, 2; in collision of cars, 1; in collision with motorcycle upon which man was riding, 1; in collision with wagon, throwing man from wagon, 1; hit by pole or tree while leaning from car, 1.

ELECTRICAL SHOCK.—In contact with live wire, 2 linemen; by lightning, 1.

ELEVATOR.—There were 2 deaths from elevator accidents in 1910; one being caught between elevator and floor and one was crushed under elevator.

EXPOSURE TO COLD.—The medical examiners recorded 6 deaths from exposure to cold specified as follows: found frozen in barn, 1; found dead on ice and in water, 1 (had been drinking); found dead near railroad tracks, 1; exposure and hunger, 1 (insane); and 2 by exposure.

FALLS.—Down stairs or steps, 16; on floor or ground, 11; on icy sidewalk, 2; from building or staging, 8; from window, 6; from platform of coal barge striking barge and fracturing skull, 1; from coal-pocket landing, 1; off coal run, 1; from haymow, 1; from tree, 5; from electric light pole, 1; from bridge, 2; from wagon, 2; from sulky, concussion of brain resulting, 1; from boiler on which machinist was working, 1; from bed, 2; into hold of steamer, 1; into ash pit, 1; circumstances unknown in 1 instance.

HEAT.—Prostration by heat and exhaustion, 1.

FIREARMS.—A boy of 12 years, while playing with a rifle, shot himself in breast; boy 5 years old was accidentally shot by older boy; young man shot himself while cleaning revolver; and one out shooting was accidentally shot by young companion.

MACHINERY.—By clothes catching in set screw of rapidly revolving shaft, 1; by bursting of emery wheel, 1; by falling into machine, 1; crushed under falling machinery, 2; caught in fly wheel, 1; perforation of intestine by stick thrown from circular saw while shifting belt, 1; hurled about shafting by sleeve catching in machine, 1; amputation of finger by machine septicemia following, 1

POISON.—By strychnine pills eaten by child for candy, 1; by oil of wintergreen, 2; overdose of cough syrup administered to infant, 1; by extract of colchicum, 1; chloroform inhaled to induce sleep, 1; carbolic acid mistaken for liquor, 2, and 3 by wood alcohol.

RAILROAD.—There were 33 deaths caused by railroad accidents which were investigated by the medical examiners.

ACCIDENTS, VARIOUS OTHER.—Crushed under boat while launching it, 1; crushed under case which fell from wagon, 1; crushed under pile of lumber, 1; crushed in cave in while working in trenches, 2; thrown from wagon seat, fracturing skull, 1; crushed under sliding cake of ice while riding on ice cart, 1; run over by heavy teams, 3 (children); thrown down by runaway horse, 1; kicked by horse, 3; leg fractured between spokes of wagon, 1 (child); boy coasting, struck tree, 1; struck on head by baseball bat, 1; struck by flying rock from blast, 1; struck on head by piece from bursted grindstone, 1; stepped on rusty nail, tetanus following, 1; injury to foot by stepping on stone, wound becoming infected, 1; hit in abdomen by falling board, 1; by falling backwards over oarlocks while jumping into boat, 1.

Under sudden deaths which were investigated by medical examiners were 12 from alcoholism; acute nephritis, 3; chronic nephritis, 29; uremia, 7; apoplexy, 9; cerebral hemorrhage, 23; organic heart dis-

ease, 89; valvular heart disease, 38; myocarditis, 1; arteriosclerosis, 2; aneurism, ruptured, 1; angina pectoris, 3; general tuberculosis, 1; pulmonary tuberculosis, 11; pulmonary embolism, 2; pulmonary hemorrhage, 3; Pott's disease of spine, 1; pneumonia, 11; broncho-pneumonia, 3; gastro-enteritis, 5; cholera infantum, 1; chronic bronchitis, 1; typhoid fever (walking typhoid), 1; epilepsy, 3; measles, 2; entero-colitis, 1; acute indigestion, 8; acute indigestion and heat, 1; puerperal peritonitis, 2; puerperal septicemia, 4; abscess brain, 1; cancer of abdomen, 1; cancer penis, 1; acromegaly, 1; hernia, 2; appendicitis, 1; general peritonitis, 1; tumor brain, 1; old age, 2; enteritis under 2 years, 2; varicose veins, 1; convulsions, 2 (infants); atelectasis pulmonum, 1; malassimilation, 5; thymus in infant one week old; lack of care, 1 (illegitimate); cause of death unknown, 13 (adults); cause of death unknown, 6 (infants); premature birth, 16; still born, 1.
